

TeamSlide Pro

Product data sheet

Specification of services

TeamSlide Pro is an application for Microsoft Windows® that facilitates easy retrieval and reusing slides created with Microsoft PowerPoint®.

TeamSlide Pro consists of two main components. The TeamSlide Engine is a stand-alone application that runs in the background and maintains an up-to-date index of PowerPoint slides. The TeamSlide add-in is an add-in for Microsoft PowerPoint that allows accessing PowerPoint content indexed by the TeamSlide Engine.

The TeamSlide Engine automatically updates the index of files in selected directories as presentations are created, edited and deleted. Directories with relevant files can be configured by the user. Additionally, PowerPoint attachments in Microsoft Outlook® mailboxes can be indexed as well as PowerPoint files on Box and Microsoft OneDrive® repositories

Indexed slides can be found from within PowerPoint using the TeamSlide add-in. It allows searching by text, modification date and author. Different text categories on a slide are recognized like slide title, body and notes. Matching results are ranked based on relevance by taking into account term frequency and importance of text categories.

The language used for the user interface of TeamSlide Pro is English.

Supported file types

PowerPoint Presentation 2007 and later (.pptx)

PowerPoint Macro-Enabled Presentation (.pptm)

Strict Open XML Presentation (.pptx)

PowerPoint Show (.ppsx)

PowerPoint Macro-Enabled Show (.ppsm)
